Recommended Operating Conditions

Case Temperature (T_C)

 $\begin{array}{lll} \mbox{Commercial} & 0^{\circ}\mbox{C to } +85^{\circ}\mbox{C} \\ \mbox{Industrial} & -40^{\circ}\mbox{C to } +85^{\circ}\mbox{C} \\ \mbox{Supply Voltage (V_{EE})} & -5.7\mbox{V to } -4.2\mbox{V} \end{array}$

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: ESD testing conforms to MIL-STD-883, Method 3015.

Note 3: The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
