ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

# FAN5451x

## 3.2 A Dual Input, Switch Mode Charger with Power Path

### Features

- Fully Integrated, High-Efficiency Charger for Single-Cell Li-Ion and Li-Polymer Battery Packs
- Power Path Circuit ensures Fast System Startup with a Dead Battery
- 95% Charge Efficiency
- Charge Current Programmable up to 3.2 A
- 10 mV Float Voltage Accuracy
- ±5% Charge Current Regulation Accuracy
- 5 V, 1.5 A Boost Mode for USB OTG
- 22 V DC Withstand Voltage on VBUS
- 13.25 V Maximum Input Operating Voltage
- -2 V Input Reverse Polarity Protection

### Benefits

- Secondary Input for Wireless Charging
- Dynamic Input Voltage Control (DIVC) for Operation with Weak Adapters
- USB BC1.2 Compatible
- Programmable 10 mA LDO
- Programmable Safety Timer with Reset Control
- Pin Configurable Ship Mode prevents Battery Discharge to System Load
- Pin or Software Configurable Hardware Reset for Quick System Restart
- Battery Temperature Sensing Ensures Safe-To-Charge Operation (JEITA)
- Thermal Shutdown and Programmable Thermal Regulation
- High-Speed I<sup>2</sup>C Interface (3.4 Mb/s) with Fast Mode Plus Compatibility

### Applications

- Smart Phones
- Tablets
- e-Books
- Li Ion Powered Devices

### Description

The FAN5451x family of chargers includes an I<sup>2</sup>C controlled 3.2 A USB-compliant switch-mode charger.

To facilitate fast system startup, the IC includes an optimized Power Path circuit which also accurately measures battery currents during charging and provides low impedance during discharge.

The charging parameters and operating modes are programmable through an I<sup>2</sup>C Interface. Charge status is reported back to the host through the I<sup>2</sup>C port and the /STAT pin.

The FAN5451x provides battery charging in three modes: Pre-Charge (IPP), Constant Current (CC) and Constant Voltage (CV). The charger can automatically restart the charge cycle when the battery falls below a restart voltage threshold. If the input source is removed, the IC enters a high-impedance mode, blocking battery current from leaking to either input.

The FAN5451x is available in a 63-bump, 0.4 mm pitch WLCSMP package.

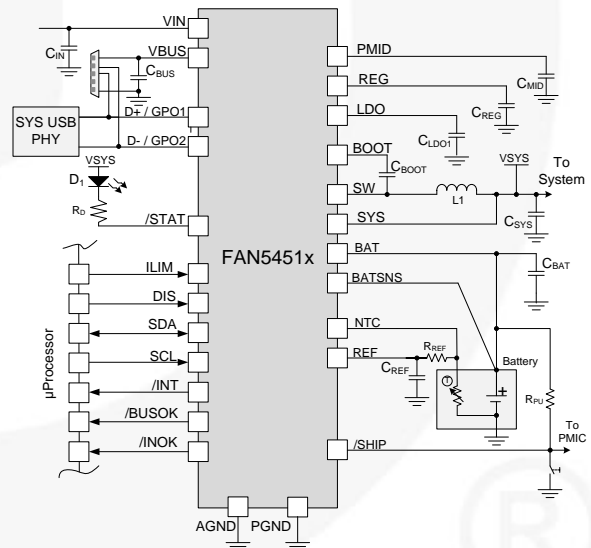

Figure 1. Typical Application

NOTES

- A. NO JEDEC REGISTRATION APPLIES.
- B. DIMENSIONS ARE IN MILLIMETERS.
- C. DIMENSIONS AND TOLERANCE PER ASMEY14.5M, 2009.
- D. DATUM C IS DEFINED BY THE SPHERICAL CROWNS OF THE BALLS.
- E. PACKAGE NOMINAL HEIGHT IS  $488 \pm 38$  MICRONS (450-526 MICRONS).
- F. FOR DIMENSIONS D, E, X, AND Y SEE PRODUCT DATASHEET.
- G. DRAWING FILNAME: MKT-UC063AA REV1.
