Application Information

1. Reference Input & Stand-by Function

- Reference input (PIN 27)
The applied voltage at the reference input pin must be between 0.8V and 6.5V, when $V_{CC}=8.5V$.
- Stand-by input (PIN 28)
The following input conditions must be satisfied for the normal stand-by function.

Stand-by input voltage	Below 0.5V or OPEN	Stand-by function is activated so the bias block and the power block are disabled
Stand-by input voltage	Above 2.0V	Normal operation

2. Protection Function

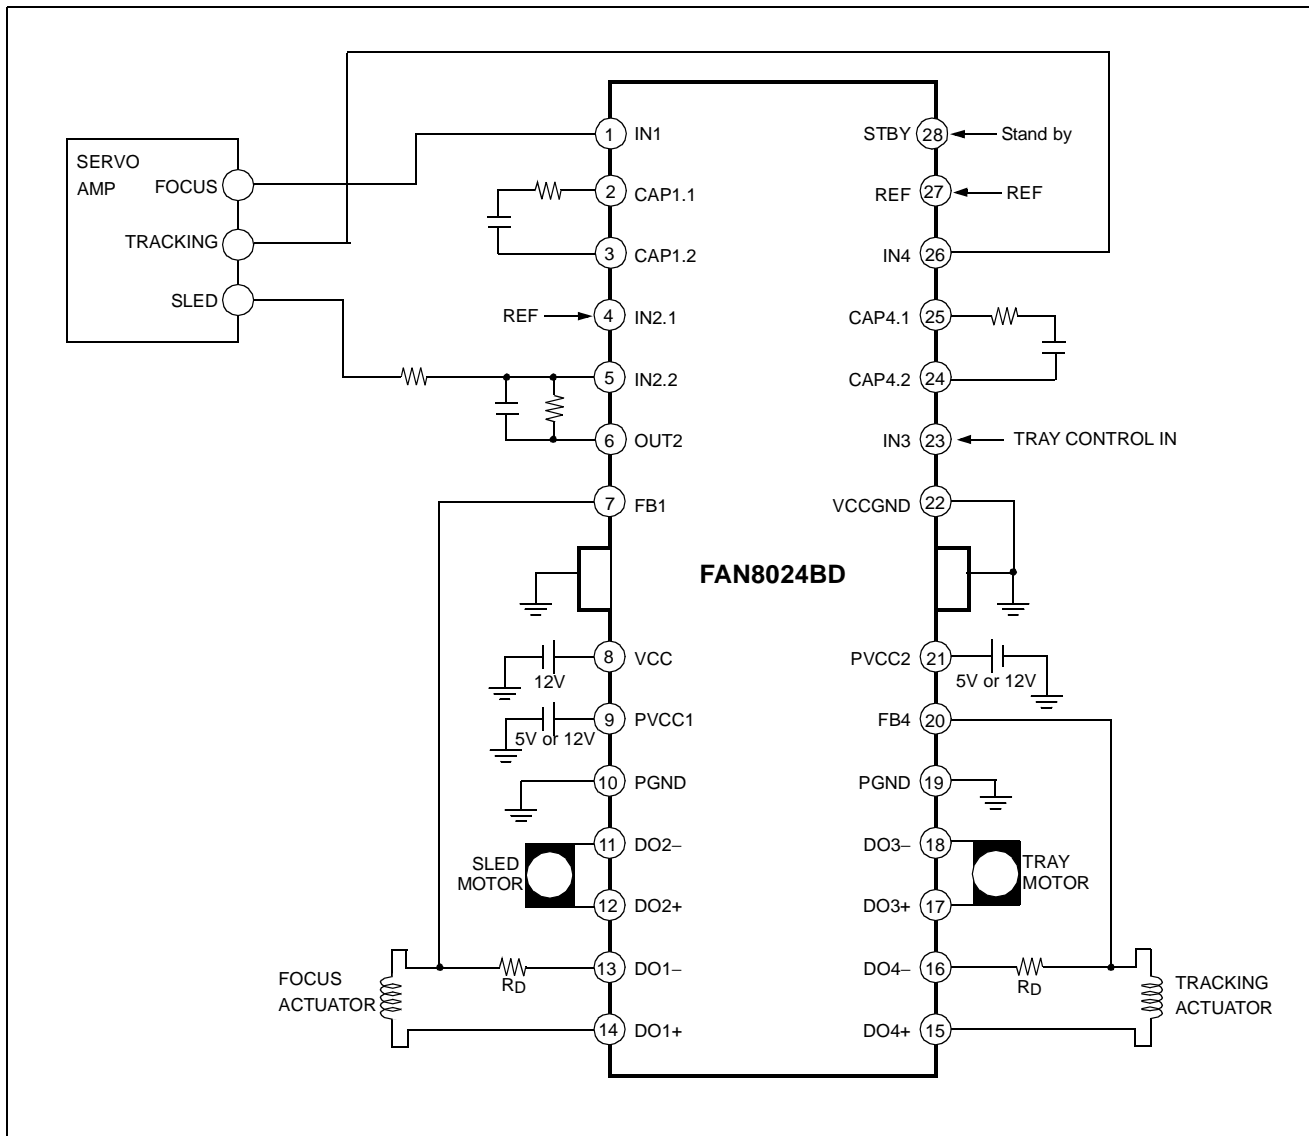

Thermal shutdown (TSD)

If the chip temperature rises above 175°C, the thermal shutdown (TSD) circuit is activated and the output circuit is in the mute state, that is off state. The TSD circuit has a temperature hysteresis of 25°C

3. Separation Of Power Supply

- PV_{CC1} (PIN 9)
 PV_{CC1} is the power supply for loading driver. The range is between 5V ~ 12V.
- PV_{CC2} (PIN 21)
 PV_{CC2} is the power supply for actuator drivers that include focus and tracking actuators. The range is between 5V ~ 12V
- V_{CC} (PIN 8)
 V_{CC} pin supplies power for sled driver and signal logic part. The voltage applied to V_{CC} must be higher than PV_{cc1} and PV_{CC2} at least 1V
