

BQ7716xy 具有外部延迟电容器且适用于 2 节至 4 节串联锂离子电池的过压保护器

1 特性

- 2、3 和 4 节串联电池过压保护
- 外部电容器编程的延迟计时器
- 固定的 OVP 阈值
- 高精度过压保护：
±10mV
- 低功耗 $I_{CC} \approx 1\mu A$
($V_{CELL(ALL)} < V_{PROTECT}$)
- 每个电池输入的低泄漏电流 < 100nA
- 小型封装引脚尺寸
 - 8 引脚 WSON (3.00 mm × 4.00 mm)

2 应用

- 电动工具
- UPS 备用电池
- 轻型电动车辆
 - 电动自行车 (eBike)
 - 电动踏板车 (eScooter)
 - 踏板辅助自行车

3 说明

BQ7716xy 器件系列提供了适用于锂离子电池包系统的过压监控器和保护器。独立监控每节电池是否具有过压状态。为了实现更快速的产品线测试，BQ7716xy 器件提供了延迟时间大幅减少的客户测试模式。

在 BQ7716xy 器件中，当检测到任意电池上存在过压状态时，即会启动外部延迟计时器。在延迟定时器超时后，输出被触发进入其激活状态（根据配置的不同为高电平或低电平）。外部延迟定时器的特性还包括检测 CD 引脚上开路或者短路延迟电容器（这也将过压条件下触发输出驱动器）的功能。

7 Specifications

7.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Supply voltage range ⁽²⁾	VDD - VSS	- 0.3	30	V
Input voltage range ⁽²⁾	V4 - V3, V3 - V2, V2 - V1, V1 - VSS, or CD - VSS	- 0.3	30	V
Output voltage range ⁽²⁾	OUT - VSS	- 0.3	30	V
Continuous total power dissipation, P _{TOT}		See package dissipation rating.		
Functional temperature		- 40	110	°C
Lead temperature (soldering, 10 s), T _{SOLDER}		300		°C
Storage temperature, T _{stg}		- 65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Absolute maximum ratings for input voltage range, output voltage range, and supply voltage are assured by design and not tested in production.

7.2 ESD Ratings

		VALUE	UNIT
V _{ESD} Rating	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{DD} ⁽¹⁾	Supply voltage	3		20	V
V4 - V3, V3 - V2, V2 - V1, V1 - VSS, or CD - VSS	Input voltage range	0		5	V
T _A	Operating ambient temperature range	- 40		110	°C

- (1) See [# 9.2](#).

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		BQ7716xy		UNIT

8 Detailed Description

8.1 Overview

In the BQ7716xy family of devices for overvoltage protection, each cell is monitored independently and an external delay timer is initiated if an overvoltage condition is detected when any cell voltage is higher than the protection voltage threshold, V_{OV} . After the delay time expires, the OUT pin is inserted.

For quicker production-line testing, the device provides a Customer Test Mode with greatly reduced delay time.

8.2 Functional Block Diagram

8.3 Feature Description

In the BQ7716xy device, each cell is monitored independently. Overvoltage is detected by comparing the actual cell voltage to a protection voltage reference, V_{OV} . If any cell voltage exceeds the programmed OV value, a timer circuit is activated. This timer circuit charges the CD pin to a nominal value, then slowly discharges it with a fixed current back down to VSS. When the CD pin falls below a nominal threshold near VSS, the OUT terminal goes from inactive to active state. Additionally, a timeout detection circuit checks to ensure that the CD pin successfully begins charging to above VSS and subsequently drops back down to VSS, and if a timeout error is detected in either direction, it will similarly trigger the OUT pin to become active. See [Figure 8-1](#) for reference.

For an NCH Open Drain Active Low configuration, the OUT pin pulls down to VSS when active (OV present), and is high impedance when inactive (no OV).

图 8-1. Timing for Overvoltage Sensing

图 8-2 shows an overview of the behavior of the CD pin during an OV sequence.

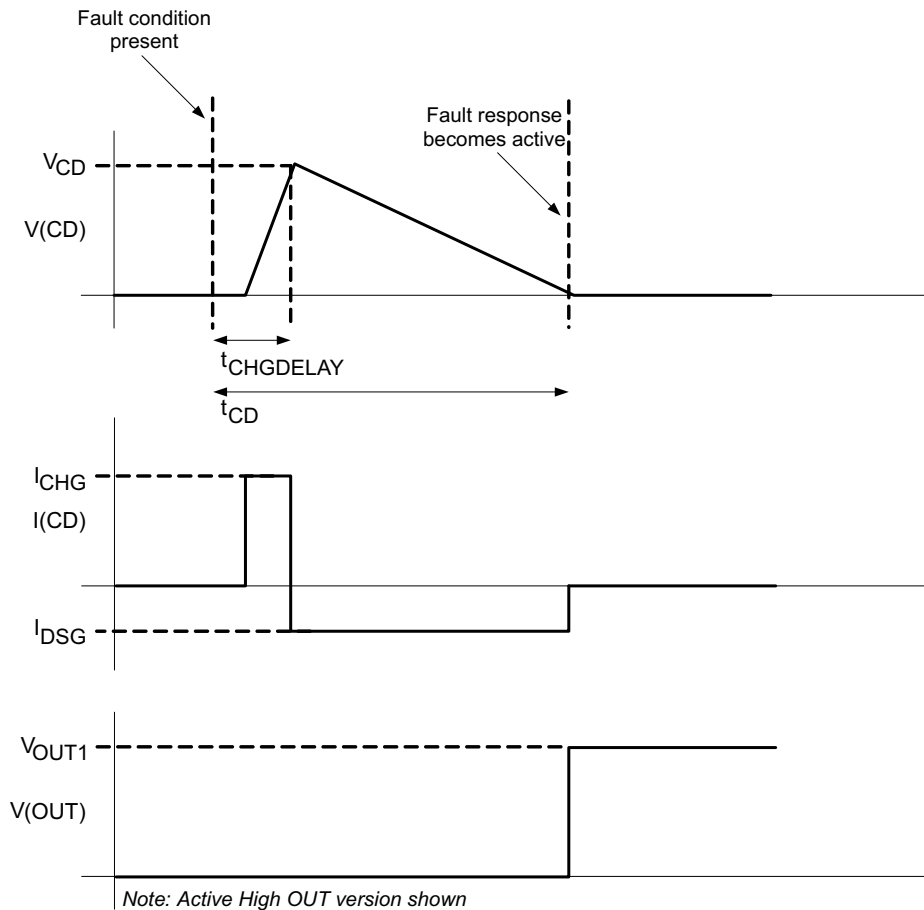

图 8-2. CD Pin Mechanism

8.3.1 Sense Positive Input for Vx

This is an input to sense each single battery cell voltage. A series resistor and a capacitor across the cell for each input is required for noise filtering and stable voltage monitoring.

8.3.2 Output Drive, OUT

This terminal serves as the fault signal output, and may be ordered in either active HIGH or LOW options.

8.3.3 Supply Input, VDD

This terminal is the unregulated input power source for the IC. A series resistor is connected to limit the current, and a capacitor is connected to ground for noise filtering.

8.3.4 External Delay Capacitor, CD

This terminal is connected to an external capacitor that is used for setting the delay timer during an overvoltage fault event.

The CD pin includes a timeout detection circuit to ensure that the output drives active even with a shorted or open capacitor during an overvoltage event.

The capacitor connected on the CD pin rapidly charges to a voltage if any one of the cell inputs exceeds the OV threshold. Then the delay circuit gradually discharges the capacitor on the CD pin. Once this capacitor discharges below a set voltage, the OUT transitions from an inactive to active state.

To calculate the delay, use the following equation:

$$t_{CD} \text{ (s)} = K \times C_{CD} \text{ (\mu F)}, \text{ where } K = 10 \text{ to } 20 \text{ range.} \quad (1)$$

Example: If $C_{CD} = 0.1 \mu\text{F}$ (typical), then the delay timer range is

$$t_{CD} \text{ (s)} = 10 \times 0.1 = 1 \text{ s (Minimum)}$$

$$t_{CD} \text{ (s)} = 20 \times 0.1 = 2 \text{ s (Maximum)}$$

备注

The tolerance on the capacitor used for C_{CD} increases the range of the t_{CD} timer.

8.4 Device Functional Modes

8.4.1 NORMAL Mode

When all of the cell voltages are below the overvoltage threshold, VOV, the device operates in NORMAL mode. The device monitors the differential cell voltages connected across (V1 - VSS), (V2 - V1), (V3 - V2), and (V4 - V3). The OUT pin is inactive and if configured:

- Active high is low
- Active low is being externally pulled up and is an open drain

8.4.2 OVERVOLTAGE Mode

OVERVOLTAGE mode is detected if any of the cell voltages exceeds the overvoltage threshold, VOV for configured OV delay time. The OUT pin is activated after a delay time set by the capacitance in the CD pin. The OUT pin will either pull high internally, if configured as active high, or will be pulled low internally, if configured as active low. When all of the cell voltages fall below the (VOV - VHYS), the device returns to NORMAL mode

8.4.3 Customer Test Mode

It is possible to reduce test time for checking the overvoltage function by simply shorting the external CD capacitor to VSS. In this case, the OV delay would be reduced to the $t_{(CHGDELAY)}$ value, which has a maximum of 170 ms.

CAUTION

Avoid exceeding any Absolute Maximum Voltages on any pins when placing the part into Customer Test Mode. Also avoid exceeding Absolute Maximum Voltages for the individual cell voltages ($V_4 - V_3$), ($V_3 - V_2$), ($V_2 - V_1$), and ($V_1 - V_{SS}$). Stressing the pins beyond the rated limits may cause permanent damage to the device.

图 8-3 shows the timing for the Customer Test Mode.

图 8-3. Timing for Customer Test Mode

图 8-4 shows the measurement for current consumption for the product for both VDD and V_x .

图 8-4. Configuration for IC Current Consumption Test

9 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

9.1 Application Information

图 9-1 shows each external component.

图 9-1. Application Configuration

备注

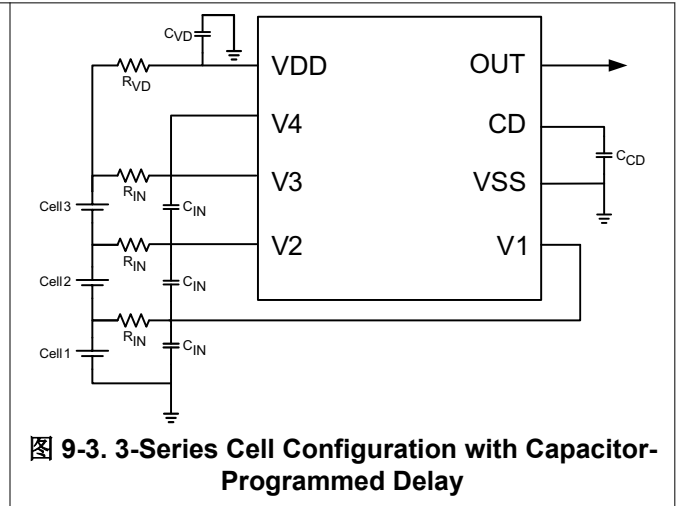

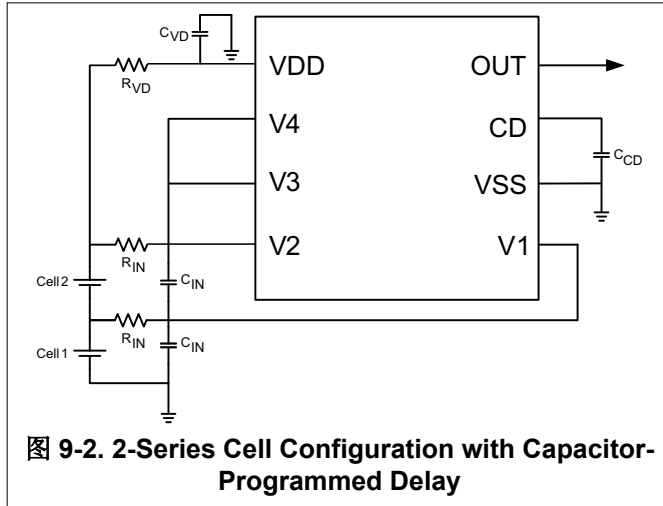

In the case of an Open Drain Active Low configuration, an external pull-up resistor is required on the OUT terminal.

Changes to the ranges stated in 表 9-1 will impact the accuracy of the cell measurements.

备注

The device is calibrated using an R_{IN} value = $1\text{ k}\Omega$. Using a value other than this recommended value changes the accuracy of the cell voltage measurements and V_{OV} trigger level.

9.2 Typical Application

备注

In these application examples of 2 s and 3 s, an external pull-up resistor is required on the OUT terminal to configure for an Open Drain Active Low operation.

9.2.1 Design Requirements

Changes to the ranges stated in 表 9-1 will impact the accuracy of the cell measurements.

表 9-1. Design Parameters

PARAMETER	EXTERNAL COMPONENT	MIN	NOM	MAX	UNIT
Voltage monitor filter resistance	R_{IN}	900	1000	1100	Ω
Voltage monitor filter capacitance	C_{IN}	0.01		0.1	μF
Supply voltage filter resistance	R_{VD}	100		1K	Ω
Supply voltage filter capacitance	C_{VD}		0.1		μF
CD external delay capacitance	C_{CD}		0.1	1	μF
OUT Open drain version pull-up resistance to PACK+	R_{OUT}		100k		Ω

9.2.2 Detailed Design Procedure

- Determine the number of cells in series. The device supports a 2-S to 4-S cell configuration. For 2S and 3S, the top unused pin(s) should be shorted as shown in 图 9-2 and 图 9-3.
- Determine the overvoltage protection delay. Follow the calculation example described in 节 8.3.4. Select the correct capacitor to connect to the CD pin.
- Follow the application schematic to connect the device. If the OUT pin is configured to open drain, an external pull-up resistor should be used. Refer to the Out Sink Current specification, IOUTH2 to ensure a proper pull-up resistor value is used, so that the OUT pin sink current is able to pull down the pin during OV condition.

9.2.3 Application Curves

10 Power Supply Recommendations

The maximum power of this device is 20 V on VDD.

11 Layout

11.1 Layout Guidelines

1. Ensure the RC filters for the Vx pins and VDD pin are placed as close as possible to the target terminal, reducing the tracing loop area.
2. The capacitor for CD pin should be placed close to the IC terminals.

11.2 Layout Example

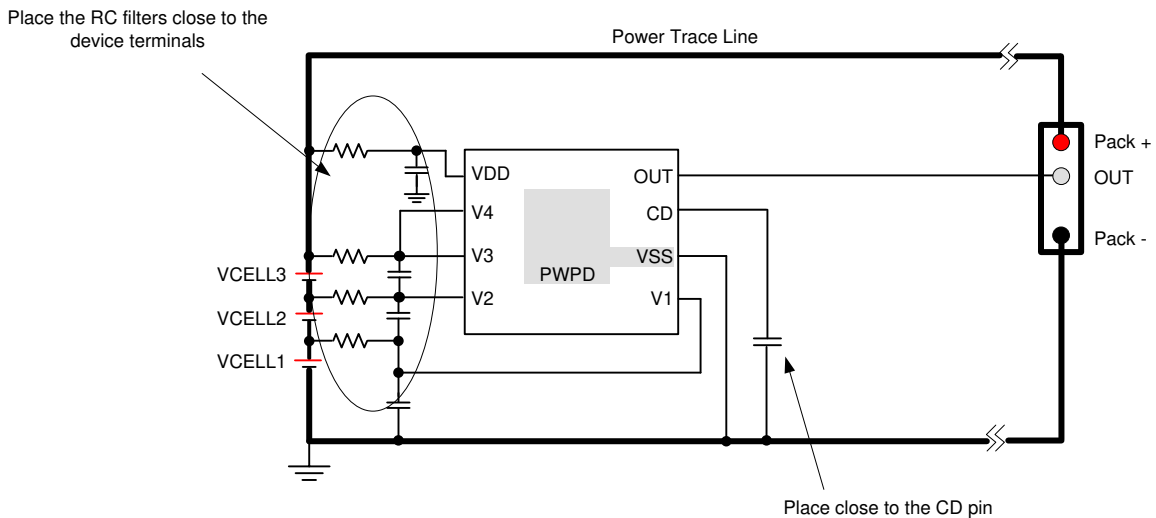

图 11-1. Layout

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 支持资源

[TI E2E™ 支持论坛](#)是工程师的重要参考资料，可直接从专家获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题可获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的《[使用条款](#)》。

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

所有商标均为其各自所有者的财产。

12.4 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

12.5 Export Control Notice

Recipient agrees to not knowingly export or re-export, directly or indirectly, any product or technical data (as defined by the U.S., EU, and other Export Administration Regulations) including software, or any controlled product restricted by other applicable national regulations, received from disclosing party under nondisclosure obligations (if any), or any direct product of such technology, to any destination to which such export or re-export is restricted or prohibited by U.S. or other applicable laws, without obtaining prior authorization from U.S. Department of Commerce and other competent Government authorities to the extent required by those laws.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DPJ0008A

PACKAGE OUTLINE

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

4218853/A 04/2019

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

EXAMPLE BOARD LAYOUT

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 20X

SOLDER MASK DETAILS

4218853/A 04/2019

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
